

New Tool Changes Method of Setting Steel I-Beams

Freedom Tools LLC of Mesa, Arizona has introduced the revolutionary **E-Z BEAM RELEASE** tools, designed to change the way the world sets steel I-beams. Invented and patented by a senior crane operator, this tool allows workers to set I-beams faster and more safely, a big advantage to any steel erection company worldwide.

The **E-Z BEAM RELEASE** tool requires a slight change in the manufacture of the beams, adding two 1"X 2" slots in the top flange equidistant in the I-

beam, one on either side of the web at 15" center. The cost of adding the two slots into the design of the beam will be small compared to the savings in time and labor. More information is available on the company [website](http://www.freedomtoolsllc.com) or by email: freedomtoolsllc@gmail.com
