Tractel Introduces a Helmet with a Complete View

The Tractel TR2000 safety helmet

Tractel has introduced the TR2000 safety helmet to solve the problem of restricted upward views caused by visors when working at height. Made with molded ABS lightweight fiber, the helmet satisfies EN397 and EN50365 standards and, therefore, is suitable for general industry use as well as electrical installation. Manufactured in Switzerland to the highest standards, the helmet has been fully tested in Germany.

It is available in three colors and can be ordered with custom logos.

Accessories such as tinted or clear integrated visor, mounted ear defenders, in-ear defenders and headlamp mounting clips are optional. The TR2000 is fully adjustable with a four-point chin strap and ratchet adjustment and includes replaceable sweatband and ventilation.

“Typically, safety helmets can also be uncomfortable and do not hold securely on the head which can prove hazardous in the event of a fall. The TR2000 provides a solution to both of these issues,” said a company spokesman.
