

Ruthmann to Introduce New 22-m Truck Mount in 2013

A drawing of Ruthmann's soon-to-be launched Steiger TBR 220

The Germany-based manufacturer Ruthmann has announced the expected launch in 2013 of its 22 m working-height Steiger TBR 220 truck mount on a 3.5 ton chassis, calling this product a “new development”.

The TBR 220’s telescopic boom--produced using cold-rolled, ultra high strength, fine-grained steel-- is multi-beveled for optimum stability at the lowest possible material weight, said the company.

It follows the TBR 200, introduced three years ago and offering a moveable jib. According to the manufacturer, the TBR 220's jib has been extended by 40 cm and will feature a swiveling range of 185, an increase of 80° over the TBR 200.

Equipped with an interchangeable working cage system, the TBR 220 offers a 16.4 m outreach. Operators can choose the aluminum working cage or a synthetic cage, depending on the project.

More details about the TBR 220 and a launch date will follow soon.
